What It Does

Envision ATLUS connects patients, families, and clinicians on a single platform — reducing readmissions, automating billing, and giving every stakeholder the information they need, when they need it.

Outcomes

Problem	How ATLUS Solves It
Patients can't access their own records	My Health Hub gives patients electronic access to meds, labs, conditions, immunizations, and care plans — 21st Century Cures Act compliant
Readmissions cost hospitals millions in CMS penalties	AI readmission risk prediction (30/7/90-day + 1-year) with automated care escalation and discharge follow-up
Families are left in the dark	Caregiver PIN access, automated family briefings, and real-time check-in visibility — no phone tag with the nurse's station
Billing revenue leaks through coding gaps	18-section revenue cycle: AI billing code suggestions, undercoding detection, HCC opportunity flags, CCM auto-tracking, and claims appeal automation
Seniors disengage between visits	Daily check-ins with mood, vitals, and symptom tracking — AI detects when engagement drops and escalates before a crisis
Clinical data is siloed across systems	FHIR R4, HL7 v2.x, X12 EDI, C-CDA, and SMART on FHIR — connects to any EHR, clearinghouse, or state registry
Staff burnout from documentation burden	

Problem	How ATLUS Solves It
	70+ AI skills: SOAP notes, discharge summaries, care plans, shift handoffs, referral letters — generated in seconds, reviewed by clinicians
No visibility into bed capacity	Real-time bed board with AI-optimized allocation, capacity forecasting, and ED boarder tracking

By the Numbers

Metric	Value
User-facing routes	193
Admin panel sections	48
AI-powered skills	70+ (Claude Sonnet + Haiku, with intelligent model routing)
Clinical specialty modules	8 (L&D, Dental, Neuro, PT, Mental Health, Cardiology, Oncology, EMS)
Interoperability standards	9 (FHIR R4, HL7 v2.x, X12 837/835/270/271/278, C-CDA, SMART on FHIR, USCDI)
MCP integration servers	11
Database tables	248+
Backend edge functions	144
Automated tests	8,415 behavioral tests across 429 suites — 100% pass rate
Authentication methods	6 (password, passkey/WebAuthn, TOTP 2FA, admin PIN, caregiver PIN, hCaptcha)
Compliance coverage	HIPAA, SOC2, 21st Century Cures Act, HTI-1, GDPR, 45 CFR 164.526

Two Products, Three Markets

Deployment	Who It's For	What They Get
WellFit Only	Community orgs, senior centers, churches	Daily engagement, vitals tracking, caregiver access, gamification, wellness programs
Envision Atlus Only	Hospitals, clinics, provider groups	Clinical workflows, bed management, specialty modules, revenue cycle, interoperability
Both Together	Integrated health systems	Home vitals flow to doctors. AI connects community wellness to clinical care. One patient, one record.

Security & Compliance

- AES-256-GCM encryption at rest and in transit
 - Row-level security with tenant isolation on every table
 - PHI never reaches the browser — patient IDs only, data stays server-side
 - 8-category HIPAA audit trail with PHI access logging
 - AI model cards for HTI-1 Decision Support Intervention transparency
 - Guardian Agent for automated self-healing security monitoring
 - 5 SOC2 trust services criteria dashboards
-

How It Was Built

Built by a superintendent and a nurse using AI development tools. \$645 total development cost. Zero software engineers.

The AI Development Methodology that produced this platform — governance documents that control AI output quality, automated hook-based rule enforcement, and adversarial cross-AI auditing — is itself a repeatable framework for building enterprise software without a traditional engineering team.

Total development cost: \$645 Development time: 9 months Engineering team size: 0
